

# NATURAL INSECT REPELLENT

HUSK Natural Insect Repellent is a concentrated repellent that deters common insects and pests in horticulture.

HUSK collects drop by drop the water condensed during the biochar process to offer a chemical-free product. The strong smoky smell protects the mature fruits from aphid, thrip & whitefly.

**Safe to apply all the way until harvest day!**

“ We can spray HUSK Natural Insect Repellent in the evening and harvest the next day, because it is safe. ”  
**Suong Hok,**  
Banan district,  
Cambodia

**Effective on aphid, thrip & whitefly**

**Safe for consumers**

**Protecting farmers' health**

Made in Cambodia

## Instructions

Dilute before use!

Use 100 ml of vinegar for every 20 litre water tank.

Spray from seedling to harvest 2 times per week & after rain.

### Husk tips

- ✓ Natural Insect Repellent can be used on its own to prevent insects, and also in combination with other products to reduce the use of pesticides.
- ✓ Improves the breakdown of organic materials for compost by helping stimulate the growth and activity of beneficial microorganisms.
- ✓ HUSK Natural Insect Repellent is highly effective to stimulate germination in seedling production, especially in times of drought. Spray on seedlings for faster and more vigorous seedling production.

## Technical Information

pH	3.07	pH buffering and affects availability of essential nutrients.
Acetic acid	24,000 mg/L	Compounds responsible for product smell and insect repellent properties.
Tar/oil	undetectable	Impurities from the pyrolysis process.
